of ovarian cancer. The compositions used none or more ovarian tumnous proteins, their associated polynucleotides, or immunogenic portions of the proteins. The ovarian tumnour polynucleotides and polypeptides are useful for stimulating and/or expanding T cells specific for a tumnour protein. They are also useful for inhibiting the development of cancer in protein. They are also useful for inhibiting the development of cancer in a patient with an ovarian tumnour DNA or protein by incubating isolated T-cells allowing them to proliferate, for cancer, for example, to monitor ovarian cancer progression. Probes and primers are useful in nucleic acid hybridisation, in detecting the presence of complementary sequences in a given sample, for preparing mutant species and for preparing other genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS2539
                                                                                                                                                                                   The invention comprises compositions used for the therapy and diagnosis
                                                               New polynucleotides encoding ovarian tumour proteins, useful for
treating ovarian cancer, and as probes, primers, and markers of cancer
progression -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     443

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hematopoiesis requiating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                 Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesls; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         part of the printed directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        214

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy and susceptibility indicators or tumour markers for anti-cancer agents. The gene information for diagnosing prognosis is related to factors similar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; neuroblastoma; malignancy; cancer; tumour marker; N-myc; TrkA; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids originating in gene expressed in human neuroblastoma, useful as probe or primer in diagnosing prognosis of human neuroblastoma, malignancy and susceptibility indicator or tumour marker for anti-cancer agents

The invention relates to novel or human neuroblastoma. The nucleis of human neuroblastoma. The nucleis of human neuroblastoma. The nucleis of consense in diamosing the prognous susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators or tuned susceptibility indicators 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     LTD.

                                                                                                                                                                                                                                                                    arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                             * NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 164504;

//note="Organ: eye; Vector: pr773-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI-E-DW0 is a cDNA library containing the following tissue(s): lens. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pr773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)!B tail. The sequence tag for this library is CGATTAGGGA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

The DNA was hydrodynamically sheared by repeated passage through a 0.05 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               H
